Hi Brad,

It is good to hear from you again. I am not sure how early you would want to survey those mines in FY10. For instance our October timeframe is booked for the helicopter and crew. Are you looking at November or later?

In the meantime, I suggest moving the period of performance date if you can.

Elaine

Subject: RE: FL PHOSPHATE AERIAL SURVEY

Elaine:

Just wanted to touch base w/ you and let you I'm still on the phosphate project.

Things have been slow this summer for a number of reasons. I have a briefing planned for my Div. Director in mid-October for the overall project. As we discussed early this year, we're looking at possibly surveying sites individually. I went back and looked at the April 2009 estimate for Coronet and Tenoroc...would they still be good for early 2010?
